Tan	56252	ROLLED FULL WIDTH (RFW)	58" / 147CM	25M

DRY CLEANING BLACKOUTS

There isn't a BS test standard for cleaning blackouts. It therefore comes down to recommending the most effective and environmentally friendly method. Several years ago we partnered Johnsons Drycleaners recommending the GreenEarth process. Of the three most popular dry-cleaning chemical processes available to the public the use of tetrachloroethene or perchloroethylene ("perc" or "PERC") is both damaging to the operative and to the environment and GreenEarth is now being challenged by Hydrocarbon cleaning. Since we last issued the recommendations the dry-cleaning industry has come a long way. These alternative processes require investment in to machinery capable of using Green earth and hydrocarbon. To date 450 are available in the UK.

We have updated the care label instructions and can confidently recommend any dry cleaner using the GreenEarth or any Hydrocarbon process even in this instance when the drape has been hanging and exposed to UV light for a number of years. If GreenEarth is not available to the consumer then the hydrocarbon process is recommended.

NUANCE

Cellular Pleated Blinds by Evans

See Section 9 for product details and prices.

Introducing our new contemporary and innovative cellular blind range, **Nuance**.

The unique technology of this product allows you to combine style with numerous beneficial properties, creating a comfortable and efficient environment for your customers.
